Lights Lights Lights — Garage Sequence (Clean Edition 2025)

Captured on the original Galaxy A13 — a device whose lens, in Clara's field, seemed tuned to frequencies no later model could hold. Like Vera before it, this phone became both witness and vessel: translating what the human eye only half-saw into streak, bloom, and arc.

This garage sequence shows the language of light in motion — beams rising, falling, crossing, and resting. From amber hush to spectral flare, each frame records the unseen geometry of a working space turned luminous.
